

MANITOBA
POPULATION PROJECTIONS
1996-2031

MBS 99-2

PRICE: \$50

JUNE 1999

Manitoba
Bureau of
Statistics

I. EXECUTIVE SUMMARY

This report presents population projections for Manitoba during the period 1996 - 2031. Three series of population projections (labelled **LOW**, **MEDIUM** and **HIGH**) are presented, based on the 1996 population estimate and recent demographic information on births, deaths, and migration. The three scenarios assume:

- (1) Manitoba's total fertility rate (TFR) will decrease to 1.65 by 2005, in the **LOW** scenario, and remain at that level for the last 26 years of the projection period.

The TFR is projected to remain constant at 1.80 for the duration of the **MEDIUM** scenario.

For the **HIGH** scenario, the TFR is projected to increase to 1.95 by 2004 and remain at that level for the last 27 years.

- (2) The **LOW/MEDIUM** scenarios have a constant value of 3,000 for net international migration.

For the **HIGH** scenario, a constant level of 4,000 net international migration is achieved by 2001.

- (3) Net interprovincial migration of -6,000 by the year 1998 for the **LOW** scenario.

The **MEDIUM** scenario has the net figure moderating to -4,000 by 1999.

The **HIGH** scenario net interprovincial migration becomes a constant -3,000 by 1999.

- (4) The life expectancy at birth increasing for females and males by 1.3 and 2.6 years resp.

A summary of the projections is:

| Year (July 1) | MANITOBA POPULATION (000's) | | | MEDIAN AGE (YEARS) | | |
|--------------------------|------------------------------------|----------------------|--------------------|---------------------------|----------------------|--------------------|
| | <u>Low</u> | <u>Medium</u> | <u>High</u> | <u>Low</u> | <u>Medium</u> | <u>High</u> |
| 1996 | 1134.3 | 1134.3 | 1134.3 | 34.5 | 34.5 | 34.5 |
| 2001 | 1139.6 | 1146.5 | 1152.6 | 36.6 | 36.4 | 36.3 |
| 2006 | 1137.2 | 1160.8 | 1183.1 | 38.2 | 37.7 | 37.2 |
| 2011 | 1131.9 | 1173.3 | 1212.5 | 39.5 | 38.7 | 37.9 |
| 2016 | 1123.7 | 1183.4 | 1240.3 | 40.7 | 39.5 | 38.5 |
| 2021 | 1110.8 | 1189.5 | 1264.6 | 41.7 | 40.1 | 39.0 |
| 2026 | 1090.1 | 1188.9 | 1283.4 | 42.7 | 40.9 | 39.5 |
| 2031 | 1060.1 | 1181.0 | 1296.5 | 43.8 | 41.6 | 40.0 |

Under the **MEDIUM** projection scenario, Manitoba's population of 1,134,300 in 1996 will increase to 1,181,000 by July 1, 2031. This represents an average annual increase of 0.1%. The **LOW** scenario is projected to have an average annual decrease of -0.2% and the **HIGH** scenario is projected to have an increase of 0.4%.

For the **MEDIUM** scenario, the constant total fertility rate and the ageing of the population will result in a decreased number of births throughout most of the projection period. From 15,100 in 1996, the number of births is projected to drop by 5.9% to 14,200 by the early 2000's, increasing slightly to 14,700 by the year 2012 and then decreasing to 13,300 by the end of the projection period.

The effect of the ageing population on the number of deaths will be moderated by the projected increase in the life expectancy at birth but still result in an increased annual number of deaths. The number of deaths is projected to increase by 56.4%, from the present 9,400 to 14,700 over the next 35 years.

Similar patterns are projected for the **LOW** and **HIGH** scenarios.

II. INTRODUCTION

This set of population projections for the Province of Manitoba has been developed in consultation with the Demographic Statistics Committee. This committee, chaired by the Manitoba Bureau of Statistics, is composed of representatives from six other departments and agencies of the Manitoba government:

- i) Education and Training
- ii) Family Services
- iii) Health
- iv) Industry, Trade and Tourism
- v) Labour
- vi) Manitoba Hydro

The Demographic Statistics Committee reviewed draft projections and adopted LOW, MEDIUM and HIGH scenarios.

The projections in this report are based on the 1996 population estimate for Manitoba, adjusted for an estimate of census undercoverage, non-permanent residents and Returning Canadians, of 1,134,300 and are meant to replace the Manitoba level population projections produced in December, 1994. The projections will be reviewed annually and revised when necessary.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projection may decrease over time.

The Manitoba Bureau of Statistics has developed a set of regional population projections that are compatible with the Manitoba level projections. These regional projections will incorporate recent demographic information for the eight Economic Regions.

Population projections can be prepared for departments' and agencies' user-defined areas, departmental regions or special sub-populations on a cost-recovery basis.

To obtain further information on this report or to order custom projections, please contact David Greenwood at (204) 945-2989.

TABLE 1 PROJECTED COMPONENTS OF POPULATION GROWTH FOR MANITOBA: IN THOUSANDS

MEDIUM SCENARIO

| CENSUS YEAR | POPULATION (JULY 1) | BIRTHS | DEATHS | NATURAL INCREASE | INTERPROVINCIAL | | | MIGRATION | | | TOTAL | |
|----------------|------------------------|--------|--------|---------------------|-----------------|------|------|-----------|-----|-----|-------|------|

NOTE: A CENSUS YEAR IS DEFINED AS JULY 1 TO JUNE 30

DATA SOURCE: STATISTICS CANADA, MANITOBA BUREAU OF STATISTICS

JUNE 1999

III. MANITOBA PROJECTED POPULATION 1996-2031

Table 1 illustrates the projected population (MEDIUM scenario) for Manitoba during the period 1996 to 2031. Also shown in the table are the projected components of population growth.

Similar data is presented in Appendix B and C for the LOW and HIGH scenarios respectively.

Manitoba's population of 1,134,300 as of July 1, 1996 is projected to increase throughout most of the projection period to a figure of 1,181,000 by July 1, 2031 (an average annual increase of 0.1%).

A constant total fertility rate of 1.80 for Manitoba and the ageing of our population will result in a projected decrease in the number of births from 15,100 in 1996 to 14,200 in the early 2000's.

A second generation echo of the baby boom will result in a moderately increased number of births to 14,700 a dozen years later before declining to 13,300 by the end of the projection period.

The projected increase in life expectancy at birth for females and males will not entirely moderate the ageing of the population so the projected number of deaths will increase from 9,400 to 14,700 by the year 2031. The natural increase of the population (births minus deaths) will decrease from 5,600 in 1996 to a value of -1,400 for the last year of the projection period.

Net international migration is projected to achieve a level of 3,000 by the year 2001 and remain at that level for the remainder of the projection period.

Net interprovincial migration is estimated to be -5,900 for 1996. Due to the ageing of the population (with lower propensity to migrate), net interprovincial migration is projected to remain at -4,000 from 1999 onward.

Total net migration will range from -3,100 in 1996 to a level of -1,000 for the last 30 years of the projection period.

Annual population gains for Manitoba will vary from 3,100 to -2,100 throughout the projection period.

The age distribution will change during the projection period with a decreased percentage of children and increased percentage of seniors. The percentage of children (aged 0 - 14 years) is projected to decrease from 21.7% in 1996 to 17.5% in 2031 as the percentage of seniors (aged 65 and over) is projected to increase from 13.5% to 21.8%.

Meanwhile, the percentage of adults (aged 15 - 64) will go from 64.7%, increase to 67.4% by 2010 and then decrease to 60.6% by 2031.

Within the adult population, the age distribution will change dramatically with the 35 - 39 age category having the largest population of 92,900 in 1996. However, by the year 2031, the 40 - 44 age category will have the largest population at 77,800.

CHART 1. COMPONENTS OF POPULATION GROWTH

MANITOBA: MEDIUM SCENARIO

1971-1996 ESTIMATED 1997-2031 PROJECTED

1971 1976 1981 1986 1991 1996 2001 2006 2011 2016 2021 2026 2031
JUNE 1999

MANITOBA BUREAU OF STATISTICS

* Includes returning Canadians & non-permanent residents

The number of very old (90 years and over) is projected to increase fairly rapidly, growing from 6,100 in 1996 to 8,900 by 2031. An average annual increase of 1.1% for the MEDIUM scenario. In 1971, there were only 2,300 Manitobans in this age group.

The median age of the population will also increase, going from 26.6 years in 1971 to the 1996 figure of 34.5 years and projected to increase to 41.6 years by 2031. For the LOW scenario, the median is projected to rise to 43.8 years while for the HIGH scenario, the median age is projected to increase to 40.0 years.

The number of females in the population is projected to increase from 571,900 in 1996 (50.42% of the total population) to 599,400 by 2031 (50.75%).

IV. PROJECTED POPULATION COMPONENTS

This section provides historical and projected data (Chart 1) on the four population components:

fertility
international migration
interprovincial migration
mortality

i) FERTILITY

The fertility assumption is expressed as the total fertility rate¹, the expected number of births per woman during the period 15 - 49 years of age.

Table 2 shows the estimated and projected total fertility rates (TFR) for Manitoba on a quinquennial basis from 1971 to 2031.

The LOW scenario shows a decline in the total fertility rate to 1.65, and then it is projected to remain constant. This value is the present rate for Canada.

The total fertility rate holds steady at 1.80 in the MEDIUM scenario for the entire 35 year period.

It is projected that the total fertility rate will return to its value of the early 1990's for the HIGH scenario, and then will remain at 1.95 throughout the projection period.

¹The total fertility rate is defined as the sum of the female age-specific fertility rates multiplied by 5 where the age-specific fertility rate is the birth rate per woman in the respective 5 year age period from 15 - 49 years of age.

**CHART 2. MANITOBA TOTAL FERTILITY RATES
1971-1998 ESTIMATED 1999-2031 PROJECTED**

MANITOBA BUREAU OF STATISTICS

JUNE 1999

TABLE 2: MANITOBA TOTAL FERTILITY RATE

| <u>ACTUAL</u> | | | | | | <u>PROJECTED</u> | |
|---------------|-------------|-------------|-------------|-------------|-------------|------------------|------|
| | | | | | | <u>HIGH</u> | 1.95 |
| <u>1971</u> | <u>1976</u> | <u>1981</u> | <u>1986</u> | <u>1991</u> | <u>1996</u> | <u>MEDIUM</u> | 1.80 |
| 2.54 | 2.02 | 1.86 | 1.89 | 1.95 | 1.90 | <u>LOW</u> | 1.65 |

The number of births in Manitoba is projected to decline throughout the first 3 years of the projection period, remain fairly constant for 5 years, increase slightly for 10 years and then decline for the remaining years.

The ageing of the female population and a decrease in the number of females in their 20's (the peak child-bearing years) results in the projected number of births declining from 15,100 in 1996 to 14,200 by the early 2000's. A second generation echo of the baby boom produces a projected slight increase in the number of births to 14,700 before the number declines to 13,300 by the year 2031.

ii) INTERNATIONAL MIGRATION

Table 3 shows the international migration components for Manitoba during the period 1981 to 1997 and projected components to 2031. This information is also presented in Chart 3.

The immigration component (which will also include returning Canadians and the net change in the number of non-permanent residents) is considerably more volatile than the emigration component.

For the LOW and MEDIUM scenarios, the immigration level is projected to decrease from 5,217 in 1996 to 4,454 the next year, and then increase over the next four years to a level of 5,200. It is then projected to remain at that level for the duration of the projection period.

Immigration in the HIGH scenario decreases from 5,217 in 1996 to 4,454 in 1997, and then increases steadily over the next four years to reach a level of 6,200 in 2001, after which it remains constant.

In all three scenarios, the emigration level is projected to decrease from 2,485 in 1996 to a level of 2,200 by the year 2000, and then remain constant.

CHART 3. INTERNATIONAL MIGRATION **MANITOBA: MEDIUM SCENARIO** **1971-1997 ESTIMATED 1998-2031 PROJECTED**

MANITOBA BUREAU OF STATISTICS
 * Includes returning Canadians & non-permanent residents

JUNE 1999

TABLE 3: INTERNATIONAL MIGRATION COMPONENTS: MANITOBA

| | <u>Immigration</u> | <u>Non-perm. Res. & Ret. Canadians</u> | <u>Emigration</u> | <u>Net Migration</u> |
|---------|--------------------|--|-------------------|--------------------------|
| 1986 | 4,084 | 981 | 1,788 | 3,277 |
| 1987 | 4,852 | 1,094 | 1,959 | 3,987 |
| 1988 | 5,304 | 1,685 | 2,401 | 4,588 |
| 1989 | 6,765 | 1,206 | 2,415 | 5,556 |
| 1990 | 6,315 | 1,021 | 2,236 | 5,100 |
| 1991 | 4,781 | 483 | 1,873 | 3,391 |
| 1992 | 5,405 | 575 | 2,195 | 3,785 |
| 1993 | 4,527 | 672 | 2,262 | 2,937 |
| 1994 | 3,790 | 998 | 2,360 | 2,428 |
| 1995 | 3,619 | 887 | 2,357 | 2,149 |
| 1996 | 4,166 | 1,051 | 2,485 | 2,732 |
| 1997 | 3,132 | 1,322 | 2,480 | 1,974 |
| Average | 4,728 | 998 | 2,234 | 3,492 |

The average value for net international migration during the twelve year period 1986 to 1997 is estimated at 3,492. The projected net figures of 3,000 and 4,000 are approximately 500 people lower/higher than the 12 year average. This implies a slightly lower net international migration figure for the LOW and MEDIUM scenarios, and a slightly higher net figure for the HIGH scenario.

CHART 4. INTERPROVINCIAL MIGRATION **MANITOBA: MEDIUM SCENARIO** **1971-1997 ESTIMATED 1998-2031 PROJECTED**

JUNE 1999

MANITOBA BUREAU OF STATISTICS

iii) INTERPROVINCIAL MIGRATION

Interprovincial migration is the most volatile component of population growth and can have the greatest impact on the year-to-year change in Manitoba's population.

TABLE 4: MANITOBA INTERPROVINCIAL MIGRATION COMPONENTS

| <u>Estimated</u> | <u>In</u> | <u>Out</u> | <u>Net</u> |
|------------------|-----------|------------|------------|
| 1986 | 17,403 | 20,633 | -3,230 |
| 1987 | 17,767 | 23,407 | -5,640 |
| 1988 | 16,170 | 25,591 | -9,421 |
| 1989 | 18,049 | 27,923 | -9,874 |
| 1990 | 16,581 | 24,268 | -7,687 |
| 1991 | 15,955 | 23,596 | -7,641 |
| 1992 | 15,848 | 21,392 | -5,544 |
| 1993 | 15,253 | 19,867 | -4,614 |
| 1994 | 15,890 | 19,110 | -3,220 |
| 1995 | 15,075 | 18,641 | -3,566 |
| 1996 | 13,833 | 19,756 | -5,873 |
| 1997 | 17,690 | 23,073 | -5,383 |
| Average | 16,297 | 22,271 | -5,974 |

Chart 4 presents data on Manitoba's interprovincial migration for the period 1971 to 2031. During the period from 1971 to 1997, net interprovincial migration has ranged from -13,884 in 1979 to 2,292 in 1982 with the average for the last 27 years being -5,339. However for the last 12 years the average annual net loss has been -5,974 persons.

| <u>Projected</u> | <u>In</u> | | <u>Out</u> | | <u>Net</u> | | |

CHART 5. LIFE EXPECTANCY AT BIRTH **MANITOBA** **1971-1996 ESTIMATED 1997-2031 PROJECTED**

MANITOBA BUREAU OF STATISTICS

JUNE 1999

There are three projected scenarios for net interprovincial migration. The MEDIUM scenario has an annual projected IN figure of 17,000 persons for most of the projection period. The LOW and HIGH scenarios have a slightly higher figure of 18,000 persons moving into Manitoba from other provinces annually. These figures are slightly above the recent trend but are close to the values from the mid and late 1980's. The OUT figures of 21,000 and 24,000 were chosen to put a range around the 12 year average of 22,271. The 24,000 figure was assigned to the LOW scenario while the 21,000 figure went to the MEDIUM and HIGH scenarios. This results in projected NET interprovincial migration scenarios of -3,000, -4,000, and -6,000 persons annually. The LOW scenario approximates the average value for the past 12 years, while the MEDIUM and HIGH scenarios produce lower projected interprovincial migration losses for Manitoba.

iv) MORTALITY

The assumption for mortality is expressed as the life expectancy at birth, which is calculated from life survival tables for Manitoba. Table 5 and Chart 5 show the Manitoba life expectancy at birth for females and males on a quinquennial basis.

It is projected that the life expectancy for Manitoba females will increase 1.3 years during the projection period, from a figure of 80.7 years in 1996 to 82.0 years by 2021. For the same time period, the life expectancy for males is projected to increase by 2.6 years from 75.4 to 78.0 years by 2021.

These assumptions are made for all three population projection scenarios.

TABLE 5: LIFE EXPECTANCY AT BIRTH: MANITOBA

| | <u>ACTUAL</u> | | | | | | <u>PROJECTED</u> |
|---------------------------|---------------|-------------|-------------|-------------|-------------|-------------|------------------|
| | <u>1971</u> | <u>1976</u> | <u>1981</u> | <u>1986</u> | <u>1991</u> | <u>1996</u> | <u>2021</u> |
| Females | 76.9 | 77.9 | 78.7 | 80.0 | 80.7 | 80.7 | 82.0 |
| Males | 70.2 | 70.7 | 72.1 | 73.4 | 74.6 | 75.4 | 78.0 |
| Female-Male Difference | 6.7 | 7.2 | 6.6 | 6.6 | 6.1 | 5.3 | 4.0 |

Although the life expectancy of Manitobans is projected to increase, the changing age distribution of the population will result in a projected increase in the annual number of deaths from 9,400 in 1996 to 12,600 by 2021 and a further increase to 14,700 by the end of the projection period.

MANITOBA BUREAU OF STATISTICS

JUNE 1999

APPENDIX D: PERFORMANCE OF PREVIOUS POPULATION PROJECTIONS

The table on page 54 shows the estimated components of population growth for Manitoba during the 5 year period 1991 to 1996 with the comparable projected components from the first three sets of population projections developed in conjunction with the Demographic Statistics Committee.

The accompanying chart displays the differences between the estimates and the projected components for the 1981, 1986 and 1991 based projections during the period 1991 to 1996. If the difference between the projected components and estimates is close to zero, the projections are considered to be accurate.

The largest differences between the projections and estimates were caused by the declining fertility assumption in the 1981 based set and from the lower interprovincial migration assumption in the 1981 based set.

The 1981 based projections were developed at the end of a period of declining fertility. The assumption was that the total fertility rate would decline to 1.45 in 1996-97. The average fertility rate for the 5 year period was actually 1.94.

Interprovincial net migration was expected to be positive from 1984 to 1989 at the time the 1981 projections were made and then projected to become increasingly negative until a value of -4,838 was reached in 1995-96. However, net interprovincial migration did not become positive but continued grow negatively. This negative trend therefore occurred earlier than projected.

One other difference is in international net migration. The 1991 based projections were too high for both international net migration and the components of non-permanent residents and returning Canadians.

The table on page 55 shows the projected components of population growth for Manitoba during the 5 year period 1996 to 2001 for the 4 sets of population projections developed in conjunction with the Demographic Statistics Committee.

The accompanying chart displays the projections in graphical form. The differences in the projections become evident once charted together. The largest differences occur in births and interprovincial net migration.

The 1981 based projection of births is much lower than the other projections. This projection was developed at the end of a period of declining fertility. The 1981 and 1986 based projections for net interprovincial migration are larger negative values than the 1991 based projection. The 1981 and 1986 projections assumed that an aging population and the decreased propensity to migrate could result in a moderate net migration of around -4,000 per year. However, the assumption in 1991 was that net migration would be even more moderate at -3,000 per year. The 1996 projections assumed a larger negative migration of -23,900 for the projection period with the last 2 years of that period having a net migration of -4,000 per year.

TABLE 1: COMPARISON OF ESTIMATED AND PROJECTED COMPONENTS 1991-1996

| Component | Estimates (1) | 1981 Based (2) | 1986 Based (2) | 1991 Based (2) |
|--|--------------------------|---------------------------|---------------------------|---------------------------|
| Births | 82,350 | 67,150 | 80,500 | 83,500 |
| Deaths | 46,420 | 47,320 | 44,800 | 45,500 |
| Net Migration | | | | |
| Interprovincial | -24,590 | -17,930 | -25,000 | -22,300 |
| International | 11,080 | 12,650 | 15,000 | 13,900 |
| Non-permanent residents & Returning Canadians | 3,620 | | | 5,000 |
| Sum of Components | 26,040 | 14,550 | 25,700 | 34,600 |
